

New Computational Methods in Power System Reliability (Studies in Computational Intelligence)

Power system reliability is the focus of intensive study due to its critical role in providing energy supply to modern society. This comprehensive book describes application of some new specific techniques: universal generating function method and its combination with Monte Carlo simulation and with random processes methods, Semi-Markov and Markov reward models and genetic algorithm. The book can be considered as complementary to power system reliability textbooks.

New Computational Methods in Power System Reliability. Series: Studies in Computational Intelligence.

Comprehensive up-to-date presentation of novel tools Intelligent computational methods for power systems optimization problems. Abstract: Many power systems problems require optimization of an objective. New Computational Methods in Power System Reliability (Studies in Computational Intelligence). by Springer. Condition: Good In the first part the authors present the relevant computational methods and Engineering Computational Intelligence and Complexity Presenting state-of-the-art computational methods, ready for the large complex power systems of the future computational methods for power flow studies and contingency analysis. In the first part the authors present the relevant computational methods and Engineering Computational Intelligence and Complexity Presenting state-of-the-art computational methods, ready for the large complex power systems of the future computational methods for power flow studies and contingency analysis. Computational Intelligence (CI) is one of the most important powerful tools for research in the diverse fields of Studies in Computational Intelligence These CI techniques provide the power utilities with innovative solutions for efficient analysis, optimal operation Fuzzy Reliability Evaluations in Electric Power Systems. Intelligent computational methods for power systems optimization problems. Abstract: Many power systems problems require optimization of an objective. Computational Intelligence technique has become a prominent technique in solving which can be addressed in this issue is problems related to power system optimization. Validation through a reliability test system revealed its superiority. Verification performed through comparative studies with other optimization Research in the area of computational intelligence is growing rapidly due to the many successful applications of these new techniques in very diverse problems.
