

Lighting diagrams

Lighting Diagrams allows you to visualize and recreate lighting equipment setups for everyday portrait sessions in the studio. The diagrams are simple and provide details of how to place a variety of lighting equipment to produce the image results you are trying to achieve. The book looks at different portrait styles, such as profile, Rembrandt, loop, paramount, broad and short lighting. It also looks at different lighting effects such as high key, low key and silhouettes. Finally, it provides lighting diagram examples of pet portraits, baby portraits and tabletop objects.
